Candidate A

Senior Backend Engineer

candidate-a@example.invalid | Toronto, ON | Fictional sample profile

PROFESSIONAL SUMMARY

Backend engineer focused on Python services, PostgreSQL, and resilient APIs. Builds and operates production systems with measurable reliability, latency, and delivery improvements.

CORE SKILLS

Python, FastAPI, REST APIs, PostgreSQL, SQL, Redis, Celery, Docker, AWS, pytest, OpenTelemetry, CI/CD

EXPERIENCE

Senior Backend Engineer | Northstar Software | 2022-2026

- Designed FastAPI and Python services used by 180,000 monthly active customers.
- Moved 36 Celery jobs to an idempotent queue with retries and dead-letter handling, cutting duplicate processing by 71%.
- Redesigned PostgreSQL indexes and query plans, reducing p95 API latency from 740 ms to 260 ms.
- Added OpenTelemetry traces, service-level alerts, and runbooks; reduced mean time to recover from 48 to 19 minutes.
- Led service reviews and mentored three engineers through pairing and design feedback.

Backend Engineer | Harborline Systems | 2019-2022

- Built versioned Python REST APIs for billing and account workflows with 99.95% monthly availability over 18 months.
- Added pytest contract and integration suites, increasing service coverage from 58% to 84%.
- Containerized services and supported staged AWS releases with automated rollback checks.
