Candidate B

Backend Software Engineer

candidate-b@example.invalid | Toronto, ON | Fictional sample profile

PROFESSIONAL SUMMARY

Software engineer with hands-on Python API and relational database experience. Delivers internal and customer-facing workflow improvements and contributes to testing and support.

CORE SKILLS

Python, Flask, Django REST, PostgreSQL, MySQL, SQL, Redis, pytest, Docker, GitHub Actions, AWS basics

EXPERIENCE

Software Engineer | Cedarline Services | 2022-2026

- Built 12 Flask REST endpoints for a customer support workflow handling about 25,000 monthly tasks.
- Optimized PostgreSQL reporting queries with indexes and query review, reducing a common report from 5.2 seconds to 1.8 seconds.
- Added pytest coverage for six services and connected regression checks to GitHub Actions.
- Joined the team's on-call rotation as a second responder and documented recurring incidents.
- Scheduled background work with cron; did not own a message queue or retry framework.

Python Developer | Westbridge Operations | 2019-2022

- Maintained Python and SQL services for order reconciliation and customer account updates.
- Introduced request validation and consistent error responses across existing Flask endpoints.
- Worked with product and frontend teammates to refine API contracts and deliver incremental releases.
